Subject: KM MECHANICAL CONTROL (PART) NLA

Recently we have been informed that the vendor to the part # 4A2430-01 (bin switch) has discontinued manufacturing of this part. Now that we can no longer supply this part to the field ALL equipment will be converted to a thermostatic control.

There are 4 kits available depending on the model. Effective Aug. 15th model number must be provided to order the correct kit when replacing mechanical control part # 4A2430-01. Kits include all the necessary parts to convert the unit. When converting pay close attention to assure that Dip Switch #7 is turned to the OFF position and also the wiring for your particular machine is correct.

Instructions are included in each kit, however for detailed wiring please refer to SB004-0008 which deals with the wiring specifically for each model.

The four kits are as follows:

HS-0165 kit is for all KM-280/500 machines.

HS-0166 kit is for all KM-630 machines.

HS-0167 kit is for all KM-900 machines.

HS-0168 kit is for all KML machines.

For questions regarding this issue please contact the Technical Support department by e-mail at techsupport@hoshizaki.com or phone at 1-800-233-1940.
