Subject: UNIVERSAL REPLACEMENT CONTROL BOARD FOR ALL DCM-450 / 700 MODELS.

Hoshizaki control board part number 440827G01 is designed as a universal replacement board to fit DCM-450 or DCM-701/700 dispenser models. It will also fit DCM-451 models after serial # G20360 or with kit SPK87-0005 installed.

The board includes a blue jumper that will be used on pins 1 & 2 of the K-4 connector on some replacement applications. To decide if the jumper is needed, look at the original board wiring at the K-4 connector and double check the unit wiring diagram.

Some models connect pins 1 & 2 to the gear motor protect relay. The blue jumper is **not** used on these applications. Simply remove the original board and connect the # 440827G01 as a direct replacement.

Other models have no connections made to pins 1 & 2. This will be evident on the K-4 connector and on the wiring diagram. On these applications, the blue jumper must be connected across pins 1 & 2. Simply snap the jumper ends into the # 1 & 2 slots on top of the K-4 connector.

*** If this jumper is not added, the compressor will not cycle on.
